Application Recommendations

- Long Control is developed for field application.
Long Control can broadcasted or it can be row and bed applied.
- When seeding at the row, blend the Long Control with the soil. (see figure 1)
You can apply the fertilizer same day with seeding.
- When you plant at the row, apply the Long Control before planting 1-2 weeks.
Blend the Long Control with the soil. (see figure 2 and 3)
- If there is a drip line, apply Long Control close to the dripper.
The irrigation is important for Plants and Long Control.
- The recommended application method depends on the crop and selected product.
